

One NES External replaces many Dies

One NES Internal instead of many Taps

Restore Damaged Threads with NEW Exciting Range of Hand Tools

Nes External and now NEW PATENTED Nes Internal thread restorers are the ideal tools for saving money during maintenance, plumbing, construction, agriculture, car repair and many other applications where there are components with a damaged thread. Compare the cost of disassembling the part in order to repair a component with the INSTANT repair that needs to be performed with the Nes External and Nes Internal thread restorers.

- » These hand tools automatically adjust to any threads diameter and pitch, can be used on left & right hand threads, both inch and metric and need no prior measurement of the thread.
- » Often the thread of component is damaged at the end of the thread eliminating the use of taps or dies for carrying out the repair. Nes External and Nes Internal thread restorers have the capability to enter BELOW the damaged area and work outwards to complete the repair.
- » The blades are made of high quality hardened tool steel (internal tools' blades – HSS, external tools blades – O1). The blades are guided by the existing undamaged section of thread, in order to re-groove the damaged section.
- » The Nes External thread restorer is available in 4 sizes and can repair threads from 4 mm diameter up to 152 mm diameter.
- » The Nes Internal thread restorer is available in 6 sizes and can repair threads from 5 mm diameter up to 68 mm diameter.
